

ABSTRACT

A medical holder for assisting an operation of puncturing a flexible tube includes a first holding member 1 and a second holding member 2. The first holding member 1 and the second holding member 2 are formed so that
5 they can be engaged with each other and can hold the flexible tube 27 therebetween when they are engaged with each other. Furthermore, a hole through which the flexible tube 27 is punctured is formed in the first holding member 1.
